Venturer Nova Award
Launch!

Venturer Nova Award for Science

1. Choose A or B or C and complete ALL the requirements.
   A. Watch about three hours total of science-related shows or documentaries that involve
      projectiles, aviation, weather, astronomy, or space technology. Then do the following:
      i. Make a list of at least two questions or ideas from what you watched.
      ii. Discuss two of the questions or ideas with your counselor.
   
   B. Read (about three hours total) about projectiles, aviation, space, weather, astronomy, or
      aviation or space technology. Then do the following:
      i. Make a list of at least two questions or ideas from what you read.
      ii. Discuss two of the questions or ideas with your counselor.
   
   C. Do a combination of reading and watching (about three hours total). Then do the following:
      i. Make a list of at least two questions or ideas from what you read and watched.
      ii. Discuss two of the questions or ideas with your counselor.

☐ Requirement 1

I chose option:  ☐ A  ☐ B  ☐ C

Name(s) of things I watched and/or read: ________________________________

☐ I made a list of at least two questions from what I read and/or watched.

☐ I discussed the ideas and questions with my Counselor

______________________________________________________________________  Date

Counselor’s okay

2. Choose ONE STEM field of interest from the following list. Complete ALL the requirements
   for a Venturing STEM Exploration in that field. See pages 27-29 of the Nova Awards
   Guidebook for the requirements. (If you have already completed a Venturing STEM
   Exploration in one of these fields, please choose a different field for this award.)

   Archery            Aviation            Shot Gun Shooting
   Astronomy          Rifle Shooting        Space Exploration
   Athletics          Robotics             Weather

☐ Requirement 2

I completed a Venturing STEM Exploration in the field of ____________________________.

______________________________________________________________________  Date

Counselor’s okay
3. Choose A or B and complete ALL the requirements.
   A. Simulations. Find and use a projectile simulation applet on the Internet (with your
      parent’s or guardian’s permission). Then design and complete a hands-on experiment to
      demonstrate projectile motion.
      i. Keep a record of the angle, time, and distance.
      ii. Graph the results of your experiment. (Note: Using a high-speed camera or video
          camera may make the graphing easier, as will doing many repetitions using
          variable heights from which the projectile can be launched.)
      iii. Discuss with your counselor:
          a. What a projectile is
          b. What projectile motion is
          c. The factors affecting the path of a projectile
          d. The difference between forward velocity and acceleration due to gravity
   B. Discover. Explain to your counselor the difference between escape velocity (not the
      game), orbital velocity, and terminal velocity. Then answer TWO of the following
      questions. (With your parent’s or guardian’s permission, you may explore websites to
      find this information.)
      i. Why are satellites usually launched toward the east, and what is a launch
      window?
      ii. What is the average terminal velocity of a skydiver? (What is the fastest you
      would go if you were to jump out of an airplane?)
      iii. How fast does a bullet, baseball, airplane, or rocket have to travel in order to
      escape Earth’s gravitational field? (What is Earth’s escape velocity?)

4. Choose A or B and complete ALL the requirements.
   A. Visit an observatory or a flight, aviation, or space museum.
      i. During your visit, talk to a docent or person in charge about a science topic related to the site.
      ii. Discuss your visit with your counselor.
   B. Discover the latitude and longitude coordinates of your current position. Then do the following:
      i. Find out what time a satellite will pass over your area. (A good resource to find the times for satellite passes is the Heavens Above website at www.heavens-above.com.)
      ii. Watch the satellite using binoculars. Record the time of your viewing, the weather conditions, how long the satellite was visible, and the path of the satellite. Then discuss your viewing with your counselor

☐ Requirement 4

☐ I chose option A. I visited ____________________________ and

   I talked to ____________________________

   I discussed the visit with my Counselor.

☐ I chose option B. My coordinates are ____________________________

   I discussed my observations with my Counselor.

   Counselor’s okay ____________________________ Date __________

5. Choose A or B or C and complete ALL the requirements.
   A. Design and build a catapult that will launch a marshmallow a distance of 4 feet. Then do the following:
      i. Keep track of your experimental data for every attempt. Include the angle of launch and the distance projected.
      ii. Make sure you apply the same force each time, perhaps by using a weight to launch the marshmallow. Discuss your design, data, and experiments—both successes and failures— with your counselor.
   B. Design a pitching machine that will lob a softball into the strike zone. Answer the following questions, then discuss your design, data, and experiments - both successes and failures—with your counselor.
      i. At what angle and velocity will your machine need to eject the softball in order for the ball to travel through the strike zone from the pitcher’s mound?
      ii. How much force will you need to apply in order to power the ball to the plate?
      iii. If you were to use a power supply for your machine, what power source would you choose and why?
C. Design and build a marble run or roller coaster that includes an empty space where the marble has to jump from one part of the chute to the other. Do the following, then discuss your design, data, and experiments—both successes and failures—with your counselor.

i. Keep track of your experimental data for every attempt. Include the vertical angle between the two parts of the chute and the horizontal distance between the two parts of the chute.

ii. Experiment with different starting heights for the marble. How do the starting heights affect the velocity of the marble? How does the starting height affect the jump distance?
